

DECRA Roofing Systems

Durability, Sustainability and Energy-Efficient Design

With a focus on durability, sustainability and energy-efficient design, DECRA® Roofing Systems continues to bring innovative solutions to today's competitive roofing market. Stone coated steel is a practical roofing solution and a sustainable alternative to traditional roofing products. A unique product, DECRA comes in six distinctive profiles — DECRA Tile, DECRA Villa Tile, DECRA Shake, DECRA Shake XD®, DECRA Shingle and DECRA Shingle Plus — one to match almost every traditional style of roofing on the market today.

The Sustainable Choice

DECRA is committed to the protection and preservation of the environment through the continuous improvement of its products and manufacturing processes. Sustainability is defined and measured many ways: durability, long-term maintenance, recycled content, recyclability, life cycle and life cycle cost, to name a few.

Stone coated steel, is durable and unlike traditional materials, requires little to no lifetime maintenance. It has a post-consumer recycled content of 25-30 percent and is 100 percent recyclable at end-of-life. Incorporating a stone coated steel roof into the design of a home or building is good for local landfills. A stone coated steel roof can be installed over existing materials; many old materials are diverted from valuable landfill space. DECRA panels are easy to use with solar. Additionally, the water runoff meets the World Health Organization standards for drinking water allowing for use with a rain catchment system.

DECRA products have a long life cycle and a lower life cycle cost than most traditional products — even those with a lower up-front cost. DECRA has recently developed a life cycle cost calculator component available at www.decra.com.

The calculator compares a DECRA stone coated steel roof with asphalt shingles and concrete/clay tile. The calculator adds a new dimension in roofing product comparison — cost of ownership.

Proven Over 50 Years

DECRA Roofing Systems is the original stone coated steel roofing product. Proven for over 50 years, DECRA has provided ageless beauty, superior performance and lasting durability. All DECRA profiles are backed by a 50-year limited warranty, a 120 mph wind warranty, are Class 4 impact resistant and steel is a non-combustible, Class A rated, material.

DECRA Roofing Systems, Inc. is a member of the U.S. Green Building Council, the Cool Roof Rating Council and an ENERGY STAR® partner. All DECRA products are manufactured in Corona, Calif. DECRA's state-of-the-art facility has achieved ISO 9001:2008, ISO 14001:2004 and OSHA 18001 certification and maintains permits with the South Coast Air Quality District.
