BASE & RIDGE BENDER

A combination tool used for bending stone coated steel to control water from blowing into the roofing system. Ideal for anywhere there's a short course in the field, head wall and ridge. The bender bends stone coated steel panels at the rakes, side walls, hips and valleys to control water from moving sideways into the roof. It is proudly designed and manufactured in the USA.

Specifications:

- Maximum ridge bend of 55 inches
- Weighs 125 pounds
- Can be used with any stone coated steel manufacturers panel
